DETAILED ACTION

Allowable Subject Matter

Claims 1-10 allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a wavefront measuring apparatus including: a plano-convex optical member disposed in a test light path in such a manner that a plane surface thereof faces toward a test optical system, said plano-convex optical member having a wall thickness approximately equal to a radius of curvature of a convex surface thereof; and wherein a space between said test optical system and said plano-convex optical member is filled with a liquid, in combination with the rest of the limitations of claim 1.

As to claim 3, the prior art of record, taken alone or in combination, fails to disclose or render obvious a wavefront measuring apparatus including: a plano-convex optical member disposed in a test light path in such a manner that a plane surface thereof faces toward a test optical system, said plano-convex optical member having a wall thickness approximately equal to a radius of curvature of a convex surface thereof; and wherein the coherence length of the light source is less than twice the product of the wall thickness of the plano convex member and the index of refraction of the plano-convex member, in combination with the rest of the limitations of claim 3.

As to claim 6, the prior art of record, taken alone or in combination, fails to disclose or render obvious a wavefront measuring method passing through a test optical system by using a measuring optical system wherein a plano-convex optical member disposed in a test light path in

As to claim 8, the prior art of record, taken alone or in combination, fails to disclose or render obvious a wavefront measuring method passing through a test optical system by using a measuring optical system a plano-convex optical member disposed in a test light path in such a manner that a plane surface thereof faces toward a test optical system, said plano-convex optical member having a wall thickness approximately equal to a radius of curvature of a convex surface thereof; and wherein the coherence length of the light source is less than twice the product of the wall thickness of the plano convex member and the index of refraction of the plano-convex member, in combination with the rest of the limitations of claim 8.
